

OSPlus TCP/IP Extension

TCP/IP extension for OSPlus

Data brief

Description

The OSPlus TCP/IP extension package supports STMicroelectronics ST20, ST40 and ST200 based devices. Compatible with the ST operating systems OS20 and OS21, it enables TCP/IP based network access and offers networking utilities such as FTP and Telnet.

The TCP/IP extension pack requires the OSPlus base package which is included with the extension package.

Features

- BootP, TFTP, DHCP support
- PPP and SLIP support
- FTP client and server, and Telnet support
- DNS resolver
- Network interfaces:
 - SMSC LAN91C111
 - SMSC LAN9x1x
 - STMAC110
 - serial port
 - USB Ethernet, cable modem, serial, host-to-host (requires OSPlus USB 2.0 extension)

1 Introduction

The OSPlus TCP/IP extension supports STMicroelectronics ST20, ST40 and ST200 based devices. It is available for Microsoft Windows, Red Hat Linux and Solaris platforms.

The OSPlus TCP/IP extension package contains the following product features:

- NexGenIP: the embedded TCP/IP stack.
- NexGenBOOT: a set of libraries that works with the TCP/IP stack and includes client and server-side support for BootP and DHCP, and client-side support for TFTP.
- NexGenPPP: a layer used with the TCP/IP stack for point-to-point connections. The point-to-point protocol (PPP) is used as a link between a variety of hosts, bridges, and routers. It is an alternative to serial line internet protocol (SLIP) which is supported through the serial driver included in the OSPlus base package.
- NexGenREMOTE: a set of utilities that provide FTP client and server, and Telnet functionality.
- NexGenRESOLV: a DNS resolver that provides a mechanism for using named resources.
- Network access is provided through the SMSC LAN 91C11, SMSC LAN 9x1x, STMAC110 and serial port drivers that are part of the base OSPlus package. It is also possible to use USB attached networking devices, such as USB Ethernet adapters, cable modems, host-to-host cables and USB serial adapters. Support for USB networking devices is provided by the ST USB 2.0 OSPlus extension package.

Separate products are available for ST20, ST40 and ST200 based devices. The ST OSPlus TCP/IP libraries are provided in binary form. Each product is delivered on a CD-ROM that includes installation files for all three supported host operating systems, plus the installation files for the required base OSPlus packages.

1.1 Prerequisites

- An ST20, ST40 or ST200 based device.
- OSPlus base package (provided free of charge, packaged with the TCP/IP extension).
- OS20 or OS21 operating system and appropriate toolset.

2 OSPlus base package and optional extensions

The OSPlus TCP/IP extension package requires the OSPlus base package. The base package is supplied free of charge with the extension package. For details of the base package, see the *OSPlus Enhancement package for OS20/OS21 data brief* (ADCS 7813502).

For details of the USB optional extension package, see the *USB 2.0 Extension for OSPlus data brief* (ADCS 7801961).

3 **Ordering information**

Table 1. Order numbers

Description	Order number
OSPlus ST20 TCP/IP Extension	ST20-TCPIP
OSPlus ST40 TCP/IP Extension	ST40-TCPIP

Please contact your nearest STMicroelectronics regional sales office or local FAE.
